Title: Posi-shell update

This week has seen our specialist contractors commence application of the Posi-shell landfill cover system.

This material is being applied to the eastern and western flanks of the facility reflecting the physical properties and application methods making it particularly suitable for use in sloped areas of the landfill. Posi-shell is used around the world for such applications and is proven in practice to be durable, weatherproof and erosion resistant.

It is very rewarding to finally see the application process underway following the long journey the product has undergone from Wyoming in the USA, via Antwerp and Liverpool, we certainly empathise with other industries facing the international shipping and driver challenges that we encountered importing this material.
