

WALLEYS QUARRY

Update

January 2022

WALLEYS QUARRY

OVERVIEW

CURRENT SITE OPERATIONS

- Cell 3 (eastern and central sections of Walleys Quarry (WQ) continues to be the main focus of operations.
- December 2021 – became necessary to recommence operations adjacent to western flank.
- Access to Cell 3 being bolstered and anticipate waste deposition recommencing wc 17/01/2022, with waste volumes from on-site transfer pad.
- Leachate continues to be treated on site, with good throughput seen.

CURRENT SITE OPERATIONS

- Gas capture and extraction remains high at approximately 3000m³/hr
- Bird/Pest control increased in line with winter working

FUTURE OPERATIONAL PLANS

- Working location - continue operations within the western area, progressively increasing volumes deposited into Cell 3.
- Installation of access road to Cell 4 to commence January 2022.
- Relocation of western gas main, to accommodate landfill operations.
- Capping and Phasing plan currently being updated
- Landfill Gas Management Plan – currently working on version 6 and anticipate submission to the Environment Agency wc 17/01/2022
- WQL would like to receive applications for the 2022 Landfill Communities fund.
